Age : 17Y

Onset Date :

DOB :

Outcome :

Causality : Causality possible

Unknown

Information: Possibility if the original diagnosis was wrong.

Reaction :

Preferred Term	Severity	Report Description	Treatment
Sexual abuse		Teenage patient with history of abnormal behaviour was on Ritalin for ADHD from unknown date for two years. Previous to receiving Ritalin, the patient was prescribed the stimulant dexamphetamine from the age of 7 years until 12 years. The patient was jailed for three years for attempted sexual assault. He had been drinking, and used the drug "ice" for the first time before he attempted the sexual assault. It was reported that there was a possibility if the original diagnosis was wrong, then it was likely that his intellectual and psychological development had been severely affected.
